CREATE
Electric fires
2019/2020

starambiente
creazione di Marcella Bibbo

Fire is dangerous, we were taught as kids. Fire is warm and cosy, we learned around the campfire. Fire is magical, we feel on a winter's night, watching the flames dance. Human civilization began with taming fire. With the invention of electric fires, we have tamed it for a second time. Whether in a private apartment, a hotel lobby, a bar or a restaurant, the technology creates

a fire that is warm, cosy and magical – and above all safe.

Heating
for generations

City smart

In the city we have to be flexible, efficient and sustainable in how we deal with our space and materials. This results in an increasing need for small, flexible homes. Small apartments, containers and tiny homes are good examples of this. The fireplace is a sustainable solution and should fit anywhere, even in the smallest space.

Communities

There is an increasing number of communities, where people live together and look after each other, living for example in apartments with individual space that can be subdivided as required by means of flexible wall partitions. There is also an increasing number of spaces where residents make much more use of shared living spaces like a laundry, a roof terrace and a living area. Wherever people gather and share facilities and personal stories, fire will connect them.

The consumer as interior designer

The interior of your home says something about who you are, what you believe in and how you want to live. People are increasingly the curator of their own home, where they create their own design and layout. Inspired by social media and personalised by means of collected objects that are displayed as a showroom of your life. Old and new are combined, we want something new, but we also want to include what is good or tells a personal story.

Flexible and modular living

Important elements in a home are space and comfort, and how you can play around with them. The fireplace can add comfort and atmosphere to the available space. Whether that space is in a stately mansion or in a small apartment, there is a solution for every home and for every room. A fireplace is not only suitable for the living room, but also adds value in your kitchen, when you are cooking for your loved ones or friends. Think of the sense of wellness provided by a fireplace when you take a luxurious bath or relax on your balcony after a long day.

The role of fire in your interior

Fire inspires, relaxes, alleviates and reduces your heart rate. Fire attracts people, stimulates contact and connects us. A cosy, comfortable fireplace gives you a sense of relaxation and well-being. Let us inspire you and add value to your interior.

Discover the difference

Whatever your style or taste, there's a fire of your dreams to match your budget. While some feature HDTV technology to create dancing flames and audible crackling logs, others deliver a 3D illusion of smoke and flame. Whichever fire you choose, it will be the warm and comforting focal point you'd always hoped for.

Find out more about the patented fire systems on the next page:
1. Optiflame®
2. Revillusion®
3. Optimyst®
4. Opti-V®

Optiflame®

A fire with Optiflame® technology shows calming flames above the lit fire bed, resulting from a soft light reflected in a large number of moving mirrors. Depending on style and mood, the colours of the flame and fire bed can easily be adjusted in some models. Very contemporary! Furthermore, the fire bed of some models can be decorated entirely to your own taste, using materials other than the ones supplied. This means you can personalise your fireplace to suit your own interior design.

Opti-V® –(Opti-Virtual)

Very lively and intensely glowing flames, with sparks that occasionally fly from the sturdy wood blocks. Opti-V® fire technology consists of a sophisticated combination of HDTV, energy efficient LED technology and a realistic fireplace interior. The calming sound of the crackling fire is a standard feature of all the Opti-V® models.

Optimyst®

Fire from water. The "fire" in a fireplace with Optimyst® technology consists of unique flame patterns and water mist, moving along freely in the surrounding air. The captivating effect is the result of a combination of energy efficient lighting and safe water mist. This water mist contributes to a good humidity level in your home.

Revillusion®

Revillusion® is our latest flame technology and a new milestone in electric fire. The brick interior gives a unique broad view of life-like flames. These flames rise up without reflection from the life-like, sparkling, glowing wood feature in the centre of the fireplace. The colour and intensity of the light can be adjusted in many different ways with the easy-to-operate remote control. The light view can be adjusted precisely to the required atmosphere, the style and the surrounding light.

Heat function
The fireplace is equipped with a heat function which can be used as an additional heater. It depends on the specific fireplace if it has one or two heat settings.

Cool Blow Function
This function will circulate the air to provide some cooling air flow which is comparable to a ventilator.

Adjustable brightness
The brightness of the firebox can be set in different levels to adjust to the desired ambience. It depends on the fireplace, of how many steps of brightness you can choose from.

Sleep-timer (8 hours)
The sleep timer can be set in 0.5 hr increments from 0.5 hr up to max 8.0 hr. The device will then turn off automatically after the pre-set time.

The Cassette 500 and 1000 will be delivered without log set.
More information about the log set on page 46.

Cassette 250
Optimyst®
27 x 14,5 x 27 cm

Cassette 400
Optimyst®
40,5 x 34 x 22 cm

Cassette 600
Optimyst®
55,6 x 34 x 22 cm

Cassette 500 retail
Optimyst®
51 x 30 x 20 cm

Cassette 1000 retail
Optimyst®
101 x 30 x 20 cm

Cassette L pebbles

All advantages at a glance

No:
- Smoke or soot
- Dust emission
- Ash
- Dirt
- Need to chop firewood
- Need to store firewood
- Need to comply with environmental regulations
- Chimney sweeps

And:
- Numerous design solutions
- Numerous integration options
- With or without heating options
- More choice
- More climate-friendly
- No or very limited installation work
- Can be used almost anywhere
- Ready for immediate use
- Reduce environmental impact

Always:
- Clean
- Simple
- Safe

Fireside tales

Simple, safe and flexible - electric
fires can be used almost anywhere.

Bonfires are great, but only outdoors. Bringing fire into the home is more complicated - the smoke needs to escape through a chimney or flue, strict legal and environmental guidelines must be observed. It's much easier with an electric fire. Plug it in, sit back, and enjoy the warm, cosy atmosphere. That's what makes electric fires so simple, safe and flexible.

They are suitable for kid's rooms, holiday homes, even yachts …Wherever and however you want them.

Let your imagination run wild. Electric fires are the ideal solution for public spaces, such as hotel lobbies, bars and restaurants where installing a gas or wood-burning fire would be highly complicated or, as usually the case, prohibited by law. In these elegant settings, a fire can create a whole new atmosphere with its magical light and flickering flames.
